Thru section

Component overlay

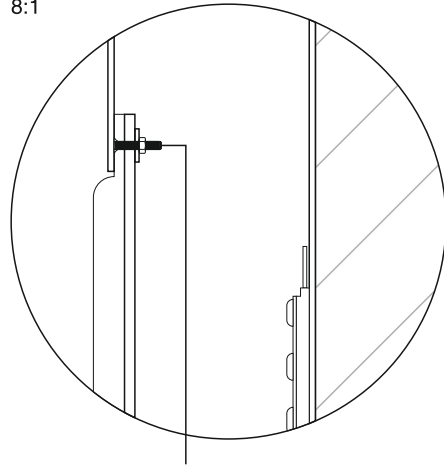

Through section A-A.
8:1

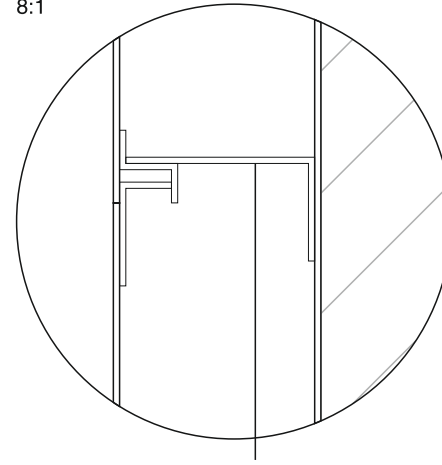

Straight edges on the backer to have a 'Z' section washer, which pushes up against the backtray to further stabilise the panel and inlays.

Through section B-B.
8:1

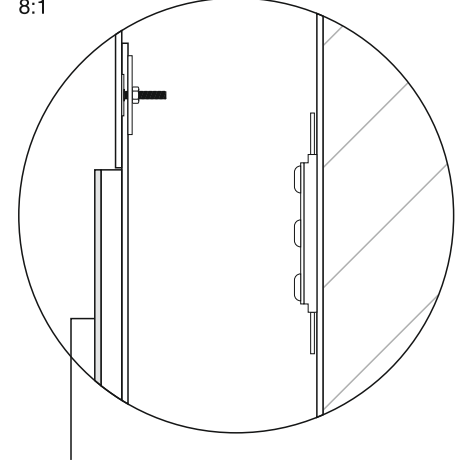

All other fixings in the backers (around the curved edges) are nipped off as standard with penny washers.

Through section C-C.
8:1

Panel split jointed with standard Z/L method. Additional angle welded to the rear of the 'Z' Section to prevent panels from bowing inwards.

Through section D-D.
8:1

3mm black acrylic face to inlays - may be better as a blockout vinyl as acrylic is not fully opaque.
